DETAILED ACTION

Election/Restrictions

Note that telephone restriction requirement is modified, and claims 9 and 10 (originally group II) are included in Group I.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to a composite product and a stretched product thereof, classified in class 524, subclass 445+.
- II. Claim 11, drawn to a process of making a composite, classified in class 526, subclass 128+.
- III. Claim 12, drawn to a process of making a stretched composite, classified in class 264, subclass 239+.

The inventions are distinct, each from the other because of the following reasons:

Inventions II (and III) and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown:

(1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process can be used to make another and materially different product such as a composite containing other fillers such as silica or titanium dioxide.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is

Art Unit: 1714

not required because the inventions have acquired a separate status in the art in view of their different classification, and because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

During a telephone conversation with Mr. Hanson on March 26, 2007 a provisional election was made with traverse to prosecute the invention of Group I, claims 1-10. Affirmation of this election must be made by applicant in replying to this Office action. Claims 11 and 12 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

⁽b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1714

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-5 and 9 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over JP 63028639 A.

The instantly recited "a composite --- comprising—" permits presences of other components such as substrate.

JP teaches a crosslinked composite formed from water soluble monomer(s) in presence of 0.01- 10 pts. of clay and a crosslinker in English abstract. Said clay is inherently water swelling. Water soluble monomers such as (meth)acrylic and acrylamide are also seen, and said (meth)acrylic inherently encompass the instant esters thereof since JP teaches they are water soluble and a salt thereof as in the instant invention.. JP also teaches that said crosslinked composite is a water-absorptive polymer, and thus it would form a hydrogel having the instant glass transition temperature (Tg) inherently since it is a soft polymer. The instant claim 9 does not recite any property, and thus said crosslinked composite would meet the invention.

Thus, the invention lacks novelty.

Art Unit: 1714

Claims 1-5 and 9 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Lorah et al (US 2002/0055581 A1 or US 2002/0058739 A1).

Lorah et al (US'581) teach an emulsion polymerization of various monomer in presence of clay and a crosslinker in [0019]-[0020], [0031], [0033], [0040] and examples 1 and 2 and table 1. The instant Tg is seen in [0104].

US'739 teaches the same in [0032], [0084] and examples 1-4.

Thus, the invention lacks novelty.

Claims 6-8 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tae H. Yoon whose telephone number is (571) 272-1128. The examiner can normally be reached on Mon-Thu.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan can be reached on (571) 272-1119. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
